Salt Lake City, UT 84114-6704
PH. (801) 530-6601/FAX (801) 530-6001

**BEFORE THE DIVISION OF CONSUMER PROTECTION
OF THE DEPARTMENT OF COMMERCE
OF THE STATE OF UTAH**

<p>IN THE MATTER OF:</p> <p>PURDUE PHARMA L.P., a Delaware limited partnership; PURDUE PHARMA INC., a New York corporation; THE PURDUE FREDERICK COMPANY, a Delaware corporation; RICHARD SACKLER, M.D., individually and as an owner, officer, director, member, principal, manager, and/or key employee of the above named entities; and KATHE SACKLER, M.D., individually and as an owner, officer, director, member, principal, manager, and/or key employee of the above named entities;</p> <p>Respondents.</p>	<p>ADMINISTRATIVE CITATION</p> <p>DCP Legal File No. CP-2019-___ DCP Case No. 107102</p>
--	---

PURSUANT TO THE AUTHORITY granted by Utah Code § 13-2-6, which empowers the Division of Consumer Protection (“Division”) to issue a citation upon reasonable cause to believe a person has violated or is violating any statute listed in Utah Code § 13-2-1, it appears, upon information and belief, that Respondents have violated the *Utah Consumer Sales Practices Act* (CSPA), Utah Code § 13-11-1 *et seq.* The Division incorporates by reference all information in the Notice to this Citation. The Division alleges:

RESPONDENTS

1. Respondent Purdue Pharma L.P. is a limited partnership organized and existing under the laws of the State of Delaware with its principal place of business located in Stamford,

Connecticut. During all relevant times, Purdue Pharma L.P. has manufactured substantial amounts of prescription opioids that have been, and continue to be, distributed and sold in Utah. Purdue Pharma L.P. has engaged in consensual commercial dealings with Utah and its citizens and has purposefully availed itself of the advantages of conducting business with and within Utah.

2. Respondent Purdue Pharma Inc. is a corporation organized and existing under the laws of New York State with its principal place of business located in Stamford, Connecticut. During all relevant times, Purdue Pharma Inc. has manufactured substantial amounts of prescription opioids that have been, and continue to be, distributed and sold in Utah. Purdue Pharma Inc. has engaged in consensual commercial dealings with Utah and its citizens and has purposefully availed itself of the advantages of conducting business with and within Utah.
3. Respondent The Purdue Frederick Company is a corporation organized and existing under the laws of the State of Delaware with its principal place of business located in Stamford, Connecticut. During all relevant times, The Purdue Frederick Company has manufactured substantial amounts of prescription opioids that have been, and continue to be, distributed and sold in Utah. The Purdue Frederick Company has engaged in consensual commercial dealings with Utah and its citizens and has purposefully availed itself of the advantages of conducting business with and within Utah.
4. Purdue Pharma L.P., Purdue Pharma Inc. and The Purdue Frederick Company will be referred to collectively as “Purdue.”
5. Respondent Richard Sackler, M.D. is an individual with a residence in Connecticut and at least one residence in Alta, Utah, now titled in the name of Superior View LLC c/o Richard Sackler, MD, with an assessed value of over \$3 million. [REDACTED]

[REDACTED]

[REDACTED]

Upon information and belief, Respondent Richard Sackler joined Purdue in 1971 as an assistant to his father, Raymond Sackler. Richard Sackler served as head of Purdue's Marketing Department and of its Research and Development Department, before serving as President of Purdue from 1999-2003, where he oversaw the early marketing of OxyContin. From 2003 to approximately 2014, he served as Co-Chairman of the Purdue Board. Richard Sackler was a Board Member of Purdue until July of 2018 when a wave of litigation was filed against Purdue. Upon information and belief, Richard Sackler has long held an ownership interest in Purdue and continues to hold an ownership interest in Purdue. Richard Sackler is the listed inventor on a number of patents assigned to Purdue, including a patent for "drug substitution therapy in drug-dependent human subjects," known in lay terms as addiction treatment. In other words, having caused the opioid epidemic, Richard Sackler, through his companies, is poised to profit further from the aftermath.

6. Respondent Kathe Sackler, M.D. is an individual with a residence in Connecticut. She is the daughter of Mortimer Sackler, one of the three original founders of Purdue, and she has served as a member of the board of directors of Purdue since the 1990s. In addition to her role on the Board, Kathe Sackler served as the Senior Vice President of Purdue.
7. Richard Sackler and Kathe Sackler, M.D. will, at times, be referred to collectively as the "Sackler Respondents."
8. Utah has personal jurisdiction over Respondents Richard and Kathe Sackler because they personally directed Purdue to conduct the deceptive or unfair acts or practices alleged herein that took place in Utah. The Sackler Respondents are "suppliers" within the

meaning of the CSPA because, through their direct involvement in Purdue’s business, they indirectly solicited and engaged in the sales of opioids in Utah; by express statutory provision, they need not deal directly with their customers. Utah Code § 13-11-3(6). Through their decisions and directives at Purdue, the Sackler Respondents knowingly caused the unlawful promotion and sales of Purdue’s opioids in Utah. Business activities that the Sackler Respondents directed include Purdue’s employment of a substantial number of sales representatives nationwide, including in Utah, to visit doctors in their local offices for the purpose of delivering deceptive marketing messages and encouraging such doctors to write prescriptions for Purdue’s opioid products. They determined the methods by which prescribers were targeted by Purdue’s sales representatives, how often the doctors were visited, and what messages and strategies were used with them. Among other things, the Sackler Respondents directed Purdue’s sales representatives, including those in Utah, to promote the use of opioids at high doses and for long periods of time, which was unfair and misleading, and which increased Purdue’s revenue, but magnified the risk to the State of Utah and its residents.

9. Respondents are subject to the Division’s jurisdiction because the actionable conduct was committed wholly or partly within Utah; because conduct committed outside Utah constituted an attempt to commit a violation within Utah; and because transactional resources located within Utah used by Respondents directly or indirectly facilitated a violation or attempted violation. Utah Code § 13-2-6(4).

BACKGROUND AND INFORMATION

10. Opioid abuse and addiction is a national public health crisis. According to the Centers for Disease Control (“CDC”), over 70,000 Americans died of a drug overdose in 2017, of

which 67.8 percent (47,600) involved opioids. The number of deaths and the prevalence of opioids were both worse in 2017 than a year prior.¹

11. Utah is not immune from the effects of this opioid crisis. According to the CDC, Utah lost 1,884 people to drug overdose deaths between 2014 and 2016, and the “main driver” of these deaths was prescription and illicit opioids.² In 2017, there were 456 opioid-related overdose deaths in Utah—a rate of 15.5 deaths per 100,000, which is higher than the national rate of 14.9 deaths per 100,000.³
12. The Respondents’ misconduct, including its consistent, intentional failure to comply with its legal obligations, has led to an epidemic of prescription opioid abuse in Utah. This epidemic resulted in a nearly 600% increase in prescription opioid-related deaths in Utah between 1999 and 2007,⁴ 466 prescription opioid-related deaths in Utah in 2016 alone,⁵ and millions drained annually from State resources.

¹ Ctr. for Disease Control & Prevention, *Drug Overdose Deaths*, <https://www.cdc.gov/drugoverdose/data/statedeaths.html> According to the CDC, over 63,000 Americans died of a drug overdose in 2016, of which 66.4 percent (42,249) reportedly involved opioids. (Ctr. for Disease Control & Prevention, Morbidity and Mortality Weekly Report, March 30, 2016, *Overdose Deaths*, 2015-2016, https://www.cdc.gov/mmwr/volumes/67/wr/mm6712a1.htm?s_cid=mm6712a1_w.)

² Ctr. for Disease Control & Prevention, *Drug Overdose Deaths*, <https://www.cdc.gov/drugoverdose/data/statedeaths.html> (Number and age-adjusted rates of drug overdose deaths by state, US 2014, 2015, 2016).

³ Ctr. for Disease Control & Prevention, Morbidity and Mortality Report, December 28, 2018, *Drug and Opioid-Involved Overdose Deaths - United States*, 2015-2017, https://www.cdc.gov/mmwr/volumes/67/wr/mm675152e1.htm?s_cid=mm675152e1_w#T1_down.

⁵ *Utah Opioid Summary*, Nat’l Inst. on Drug Abuse, <https://www.drugabuse.gov/drugs-abuse/opioids/opioidsummaries-by-state/utah-opioid-summary>.

13. This epidemic has drained State resources from the criminal justice,⁶ social services and welfare,⁷ education,⁸ and healthcare systems.⁹ Prescription opioid abuse costs the citizens and State of Utah approximately \$238 million in healthcare costs each year.¹⁰
14. Prescription opioids are powerful pain-reducing medications. They include non-synthetic derivatives of the opium poppy (also called “opiates,” such as codeine and morphine), partially-synthetic derivatives (such as hydrocodone and oxycodone), and fully-synthetic derivatives (such as fentanyl and methadone).
15. While opioids can dampen the perception of pain, they also can create an addictive, euphoric high. At higher doses, they can slow the user’s breathing, causing potentially fatal respiratory depression. Most patients receiving more than a few weeks of opioid therapy

⁶ *The High Price of the Opioid Crisis*, Pew Charitable Trusts July 2017, http://www.pewtrusts.org/~media/assets/2017/07/highpriceofopioidcrisis_infographic_final.pdf?la=en. In 2013, \$7.6 billion was spent nationally on criminal justice costs associated with prescription opioid abuse, and 96% of the costs fell to state and local governments.

⁷ The Nat’l Ctr. on Addiction and Substance Abuse, *Shoveling Up II: The impact of substance abuse on federal, state, and local budgets* 27 (2009), <http://www.centeronaddiction.org/addictionresearch/reports/shoveling-iiimpact-substance-abuse-federal-state-and-local-budgets>. In 2005, state governments spent 27% of the amount they spend on healthcare to fund the social services related to substance abuse.

⁸ *Id.* at 24. In 2005, approximately 12.2% of federal government education spending “was spent coping with the impact of substance abuse and addiction.”

⁹ Matric Global Advisors, *Health Care Costs from Opioid Abuse: A state-by-state analysis* 5 (2015), http://drugfree.org/wp-content/uploads/2015/04/Matrix_OpioidAbuse_040415.pdf; Kohei Hasegawa et al., *Epidemiology of Emergency Department Visits for Opioid Overdose: A population-based study*, 89 *Mayo Clinic Proceedings* 462, 465, 467 (2014) (there are about two times as many opioid overdoses in Emergency Department among publicly-insured individuals than among individuals with private insurance and publicly-insured individuals are approximately twice as likely to have a second visit to the Emergency Departments for opioid overdose as are privately-insured individuals); Cong. Research Serv., *Medicaid’s Federal Medical Assistance Percentage (FMAP)* 14–15 (2016), <https://fas.org/sgp/crs/misc/R43847.pdf> (the State of Utah pays for approximately 30% of publicly funded healthcare expenses).

¹⁰ Matric Global Advisors, *Health Care Costs from Opioid Abuse: A state-by-state analysis* 5 (2015), http://drugfree.org/wp-content/uploads/2015/04/Matrix_OpioidAbuse_040415.pdf.

will experience withdrawal symptoms—including severe anxiety, nausea, headaches, tremors, delirium, and pain—which are often prolonged, if opioid use is delayed or discontinued. When using opioids continuously, patients grow tolerant to their analgesic effects (i.e. to relief of pain)—requiring progressively higher doses and increasing the risks of withdrawal, addiction, and overdose. Prescription opioids are no less addictive than heroin. No other medication routinely used for a nonfatal condition kills patients so frequently.¹¹ When used long-term to treat chronic pain conditions, those risks are amplified.

16. The Respondents have intentionally engaged, and continue to engage, in an aggressive marketing campaign to overstate the benefits and misstate and conceal the risks of treating chronic pain with opioids in order to increase their profits. Utah law prohibits suppliers from using misleading or deceptive practices to market their products. Nonetheless, Purdue disseminated misstatements through multiple channels, representing opioids as beneficial in treating chronic pain long-term, and as having a low risk of addiction. This campaign included websites, promotional materials distributed in Utah, conferences available to Utah prescribers, dinner programs held in Utah for Utah prescribers, guidelines for doctors, thousands of personal visits between Respondents' sales representatives and Utah prescribers in their medical offices, and other such modes of communication. Purdue also helped cultivate a narrative that pain was undertreated and pain treatment should be a higher priority for health care providers. This paved the way for increased prescribing of opioids for chronic pain.

¹¹ Thomas R. Frieden and Debra Houry, New England Journal of Medicine, *Reducing the Risks of Relief, the CDC Opioid-Prescribing Guideline*, at 1503 (Apr. 21, 2016).

17. In addition, Purdue paid at least two Utah doctors to be “key opinion leaders.” They wrote promotional materials supporting opioids as the best approach to pain management, and prescribed lethal amounts of opioids to Utah residents from their Salt Lake City offices.¹²
18. Purdue’s marketing campaign enabled Purdue to overcome the longstanding medical consensus that opioids were unsafe for the treatment of chronic pain. Purdue’s campaign resulted in a significant increase in the number of opioids prescribed nationwide. In fact, between 1999 and 2015, the number of opioids prescribed nationwide tripled.¹³ Not surprisingly, deaths from prescription opioid use quadrupled between 1999 and 2011.¹⁴ Between 2002 and 2015, the number of opioid prescriptions dispensed in Utah increased by over one million. In 2015, Utah prescribers wrote 73.1 opioid prescriptions per 100 persons, compared to the national average of 70 opioid prescriptions per 100 persons.¹⁵
19. The increase in opioid prescriptions to treat chronic pain correlates with an increase in the number of people becoming addicted to opioids and seeking prescription opioids for non-medical purposes.¹⁶ Nationally, the number of people who take prescription opioids for

¹⁵ National Institute on Drug Abuse, *Opioid-Related Overdose Deaths*, <https://www.drugabuse.gov/drugsabuse/opioids/opioid-summaries-by-state/utah-opioid-summary>.

¹⁶ Chronic pain is often defined as any pain lasting more than 12 weeks. National Institutes of Health, NIH.

non-medical purposes is now greater than the number of people who use cocaine, heroin, hallucinogens, and inhalants combined.¹⁷ In Utah alone, data from the Substance Abuse and Mental Health Services Administration indicates that from 2012-2014, between 7.3% and 8.54% of 18 - 25 year-olds used prescription opioids for non-medical purposes.¹⁸

20. This increase in addiction and non-medical demand has corresponded with an increase in “diversion.” Diversion occurs when the prescription opioid supply chain breaks and the drugs are transferred from legitimate channels to illegitimate ones.
21. The legitimate supply chain for prescription opioids begins with the manufacture and packaging of the pills. Manufacturers, including Purdue, then transfer the pills to distribution companies. Distributors then supply opioids to pharmacies and other healthcare providers, which then dispense the drugs to consumers. Diversion to illicit use can occur anywhere in the supply chain, from a distribution truck or pharmacy robbery, to a curious teenager taking pills a parent inadvertently left accessible.

¹⁷ Substance Abuse and Mental Health Servs. Admin., *Results from the 2015 National Survey on Drug Use and Health: Detailed Tables*, <https://www.samhsa.gov/data/sites/default/files/NSDUH-DetTabs-2015/NSDUH-DetTabs-2015/NSDUH-DetTabs-2015.pdf>.

¹⁸ Substance Abuse and Mental Health Servs. Admin., *2012-2014 National Survey on Drug Use and Health Substate Age Group Tables* 143 (2015), <https://www.samhsa.gov/data/sites/default/files/NSDUHsubstateAgeGroupTabs2014/NSDUHsubstateAgeGroupTabs2014.pdf> (in Utah, though statistics varied according to substate region, 4.15% of people age 12-15, and 3.03% of people 26+, engage in the non-medical use of prescription pain relievers).

22. Of the 2.2 million opioid prescriptions issued in Utah in 2015 (nearly one prescription per Utah resident), studies suggest that as many as 281,600 of those prescriptions were diverted to non-medical uses.¹⁹
23. The extent to which opioids are diverted into illicit use is even more concerning because Utah has the second highest high-dose opioid prescription rate in the United States.²⁰
24. In 2017, Carbon County had the highest opioid prescribing rate in Utah, at 154.1 prescriptions per 100 residents.²¹ The county with the next highest prescribing rate was Sevier, with 108.2 prescriptions per 100 residents. By comparison, the rates in Salt Lake and Tooele Counties were 63.2 and 64.0 prescriptions per 100 residents, respectively.
25. One result is that the economic impacts of the opioid epidemic seen nation and state-wide, are even more pronounced in some of the communities least equipped to address them.

¹⁹ *Opioid Pain Reliever Prescriptions*, Nat'l Inst. on Drug Abuse, <https://www.drugabuse.gov/drugsabuse/opioids/opioid-summaries-by-state/utah-opioid-summary>. The studies estimate that the percentage of prescription opioids that are diverted to illegitimate purposes ranges from 1.9 percent to 12.8 percent of total prescriptions. B.L. Wilsey et al., *Profiling Multiple Provider Prescribing of Opioids, Benzodiazepines, Stimulants, and Anorectics*, 112 *Drug and Alcohol Dependence* 99 (2010) (estimating that 12.8% of prescriptions are diverted); N. Katz et al., *Usefulness of Prescription Monitoring Programs for Surveillance—Analysis of Schedule II Opioid Prescription Data in Massachusetts, 1996–2006*, 19 *Pharmacoepidemiology and Drug Safety* 115 (2010) (estimating the diversion rate at 7.7% when defining likely diversion as patients that obtain opioids from at least 3 prescribers and at least 3 pharmacies in a year); D.C. McDonald & K.E. Carlson, *Estimating the Prevalence of Opioid Diversion by “Doctor Shoppers” in the United States*, 8 *PLOS ONE* (2013) (estimating the diversion rate at 1.9% of all prescriptions and 4% of total grams dispensed).

²⁰ *Annual Surveillance Report of Drug-Related Risks and Outcomes: United States, 2017*, Ctr. Disease Control & Prevention, 10 <https://www.cdc.gov/drugoverdose/pdf/pubs/2017-cdc-drug-surveillance-report.pdf>.

²¹ Centers for Disease Control and Prevention, U.S. County Prescribing Rates (2017), <https://www.cdc.gov/drugoverdose/maps/rxcounty2017.html>.

28. Respondents' actions have caused significant harm to the State and its agencies, including the costs of (a) medical care, therapeutic and prescription drugs, and other treatments for patients suffering from opioid-related addiction, overdoses, or disease, or from medical conditions exacerbated by opioid abuse; (b) treatment of infants born with opioid-related addiction or medical conditions; (c) law enforcement and public safety measures necessitated by the opioid crisis; (d) opioid-related counseling and rehabilitation services; (e) welfare for children whose parents suffer from opioid-related disease or incapacitation; (f) expenditures under Medicaid for purchases of prescription opioids for non-medical, illegitimate, or other improper purposes; and (g) emergency room care. These costs continue to mount.
29. In this administrative petition, the State describes these harms not to recover them, but so that they may be weighed in determining the civil penalties appropriate for Purdue's conduct.

OPIOID PAINKILLERS AND RESPONDENTS' DECEPTIVE MARKETING

30. Prescription opioids are powerful pain-reducing medications that include non-synthetic, partially-synthetic, and fully-synthetic derivatives of the opium poppy. While these drugs can have benefits when used properly, and under appropriate medical supervision, they also pose serious risks. In March of 2016, the FDA emphasized the “known serious risk[] of . . . addiction”—“even at recommended doses”—of all opioids.”²⁵ In particular, government agencies have warned that “continuing opioid therapy for 3 months

²⁵ *FDA announces safety labeling changes and postmarket study requirements for extended-release and long-acting opioid analgesics*, FDA (Sep. 10, 2013); *see also FDA announces enhanced warnings for immediate-release opioid pain medications related to risks of misuse, abuse, addiction, overdose and death*, FDA (Mar. 22, 2016), <https://www.fda.gov/NewsEvents/Newsroom/PressAnnouncements/ucm491739.htm>.

substantially increases risk for opioid use disorder,”²⁶ and that opioid risks include “misuse, addiction, overdose and death, especially with long term use.”²⁷

31. Given these risks, the marketing, distribution, and sale of prescription opioids are heavily regulated under Utah and federal law. Utah’s Pharmacy Practice Act, Utah Code § 58-17b-101, *et seq.*, Utah’s Controlled Substances Act, Utah Code § 58-37-1, *et seq.*, and numerous professional regulations related to persons who handle, prescribe, and dispense controlled substances provide strict controls and requirements throughout the opioid distribution chain. These provisions of Utah law also incorporate and reference federal law regarding the marketing, distribution, and sale of prescription opioids, including the Federal Controlled Substances Act, 21 U.S.C. § 801, *et seq.*, and the Federal Food, Drug, and Cosmetic Act, 21 U.S.C. § 321, *et seq.*
32. As discussed below, despite the dangers of prescription opioids, the Respondents fraudulently marketed them through misleading statements that mischaracterized the true magnitude of those risks and overstated the benefits of opioids in a deliberate effort to increase profits by deceiving prescribers, who reasonably relied on such representations. The Respondents’ actions created an inflated market for prescription opioids, which caused injury to healthcare programs and other third-party payors of healthcare costs, including the costs of opioid prescriptions, and led to massive diversion of these drugs from legitimate to illegitimate channels. As a result of the Respondents’ wrongful acts, Utah and its citizens suffered injuries and damages.

²⁶ 2016 CDC Guideline at 21.

²⁷ CDC Opioid Overdose, Prescription Opioid Data, <https://www.cdc.gov/drugoverdose/data/prescribing.html>.

I. Purdue made misleading statements about the risks and benefits of opioids.

33. In the mid-1990s, at about the time Purdue introduced its drug OxyContin to the marketplace, the medical community was aware of both the risks of opioids and the relative ineffectiveness of long-term opioid use. Dr. Russell Portenoy, whose theories were later adopted by Purdue, acknowledged the prevailing medical understanding regarding use of opioids long-term for non-cancer pain:

The traditional approach to chronic non-malignant pain does not accept the longterm administration of opioid drugs. This perspective has been justified by the perceived likelihood of tolerance, which would attenuate any beneficial effect over time, and the potential for side effects, worsening disability, and addiction. According to conventional thinking, the initial response to an opioid drug may appear favorable, with partial analgesia and salutatory mood changes, but adverse effects will inevitably occur thereafter.²⁸

Thus, in 1994, conventional wisdom predicted that opioids would appear effective in the short term, but prove ineffective over time with increasing negative effects.

34. The medical community knew that published reports associated opioid use “with heightened pain and functional impairment, neuropsychological toxicity, prevarication about drug use, and poor treatment response.”²⁹ Dr. Portenoy noted: “the problematic nature of opioid therapy in some patients is unquestionable, and the potential adverse impact of all possible outcomes related to treatment, including physical dependence, deserves to be addressed.”³⁰

²⁸ Russell Portenoy, *Opioid Therapy for Chronic Nonmalignant Pain: Current Status*, 1 Progress in Pain Res. & Mgmt, 247 (1994).

²⁹ Russell K. Portenoy, *Opioid Therapy for Chronic Nonmalignant Pain: A Review of the Critical Issues*, 11 J. Pain & Symptom Mgmt. 203, 206 (1996).

³⁰ *Id.*

35. Dr. Portenoy argued in favor of expanding the use of opioids, pointing to evidence from opioid use among cancer patients. He posited that there was a population of patients without cancer who could benefit from long-term opioid use. Even then, he admitted, “controlled trials suggest favorable outcomes, but are very limited. The generalizability of these data are questionable due to the brief periods of treatment and follow-up.”³¹
36. Dr. Portenoy claimed that the lack of evidence should not deter doctors from prescribing opioids, arguing there was a lack of data that non-malignant pain generally, or any patient subgroup with non-malignant pain (such as those with neuropathic pain, low back pain, headache, or idiopathic pain), are inherently unresponsive to opioid drugs. Consequently, he believed, opioid therapy could not be withheld based on the assumption that any particular pain or patient group will inevitably fail to benefit.³²
37. Purdue seized on, and intentionally distorted, Dr. Portenoy’s work, emphasizing the benefits of opioids for chronic pain, but failing to convey the limitations of existing research and the cautions for their use. Where Portenoy proposed a clinical experiment with “appropriate monitoring,” Purdue, through its marketing, expanded the “empirical treatment” to thousands of busy primary care physicians, nurse practitioners, physician assistants, and other prescribers, none of whom had Dr. Portenoy’s expertise.
38. Purdue’s business and marketing model nationalized an experiment in the absence of good evidence. Purdue hired other health care professionals that Purdue identified as “key opinion leaders” and, through an extensive marketing scheme, set about convincing the rest of the medical establishment, patients, and policy makers to participate willingly in the

³¹ *Id.*

³² *Id.*

experiment. Purdue did so by deceptively presenting the experimental hypotheses as facts – that (a) opioids would be more effective than alternatives at treating chronic non-cancer pain long-term; and (b) the risks of addiction and associated problems were both slight and manageable. Purdue’s factual claims were unsubstantiated and, unfortunately for the many Utahns who have suffered as a result, untrue.

39. Purdue has made statements through its sales representatives visiting Utah doctors, websites, promotional materials, conferences, guidelines for doctors, and other modes of communication that suggested that the risk of opioid addiction when used for chronic pain was low — statements directly contrary to established scientific evidence.

40. Purdue’s marketing claims also differ from the safety warnings that Purdue must place on many of its opioid products. In fact, Purdue has been repeatedly fined or otherwise sanctioned for its misleading statements in marketing opioids.

A. Purdue seeded the science of opioid efficacy and risk with flawed and biased research.

41. Rather than rigorously test the safety and efficacy of opioids for long-term use, Purdue created scientific support for its marketing claims by sponsoring studies that were methodologically flawed, and biased, and which drew inappropriate conclusions from prior evidence. It then published studies with favorable outcomes and suppressed the problematic ones. The result was a body of literature whose primary purpose was to promote the use of opioids for chronic pain but which was passed off as legitimate scientific research. Subsequent studies then cited—and continue to cite—this research to insidious effect. The body of evidence on which physicians rely to prescribe opioids now fully incorporates Purdue’s skewed science.

42. For example, Purdue-sponsored studies, and the Purdue marketing materials that cited them, regularly made claims that the risk of psychological dependence or addiction is low absent a history of substance abuse. One such study, published in the journal *Pain* in 2003 and widely referenced since (with nearly 600 citations in Google Scholar),³³ ignored previous Purdue-commissioned research showing addiction rates between 8% and 13%—far higher than Purdue acknowledged was possible in its mainstream marketing. Purdue relegated those earlier studies to less prominent headache journals, where it knew they would be less widely read.³⁴
43. Instead, to support the claim that OxyContin rarely was addictive, the *Pain* article reached back to a 1980 letter to the editor—not an article, but a letter—in the *New England Journal of Medicine*.³⁵ That letter, the “Porter-Jick Letter,” appeared as follows:

³³ C. Peter N. Watson et al., *Controlled-release oxycodone relieves neuropathic pain: a randomized controlled trial in painful diabetic neuropathy*, 105 *Pain* 71 (2003).

³⁴ Lawrence Robbins, *Long-Acting Opioids for Severe Chronic Daily Headache*, 10(2) *Headache Quarterly* 135 (1999); Lawrence Robbins, *Works in Progress: Oxycodone CR, a Long-Acting Opioid, for Severe Chronic Daily Headache*, 19 *Headache Quarterly* 305 (1999).

³⁵ J. Porter & H. Jick, *Addiction Rare in Patients Treated with Narcotics*, 302(2) *New England Journal of Medicine* 123 (1980).

ADDICTION RARE IN PATIENTS TREATED WITH NARCOTICS

To the Editor: Recently, we examined our current files to determine the incidence of narcotic addiction in 39,946 hospitalized medical patients¹ who were monitored consecutively. Although there were 11,882 patients who received at least one narcotic preparation, there were only four cases of reasonably well documented addiction in patients who had no history of addiction. The addiction was considered major in only one instance. The drugs implicated were meperidine in two patients,² Percodan in one, and hydromorphone in one. We conclude that despite widespread use of narcotic drugs in hospitals, the development of addiction is rare in medical patients with no history of addiction.

JANE PORTER
HERSHEL JICK, M.D.
Boston Collaborative Drug
Surveillance Program
Boston University Medical Center

Waltham, MA 02154

44. The Porter-Jick Letter does not reflect any study, but simply describes a review of the charts of hospitalized patients who had received opioids. The Porter-Jick Letter notes that the review found almost no references to signs of addiction, though there is no indication that staff were instructed to assess or document signs of addiction. And because the opioids were administered in a hospital, there was no risk of patients taking more or higher doses than were prescribed.
45. The Porter-Jick Letter has become a mainstay in scientific literature, with more than 1,000 citations in Google Scholar. Purdue, for example, has cited it in support of Purdue's patently false marketing claim that "less than 1%" of opioid patients become addicted, most prominently in its 1998 "I Got My Life Back" video. Yet Purdue failed to disclose either the nature of the citation (a letter, not a study) or any of its serious limitations. Dr. Jick later complained that drug companies "pushing out new pain drugs" had misused the Letter—citing it to conclude that their opioids were not addictive, even though "that's not in any

shape or form what we suggested in our letter.”³⁶ In June 2017, the *New England Journal of Medicine*, citing a new analysis of the Porter-Jick Letter’s citation history, added this editor’s note to its online version of the Letter: “For reasons of public health, readers should be aware that this letter has been ‘heavily and uncritically cited’ as evidence that addiction is rare with opioid therapy.”

46. Purdue published other research supporting chronic opioid therapy that was just as flawed as the 2003 *Pain* article. One such Purdue-sponsored study, which featured two Purdue-employed authors and appeared in the *Journal of Rheumatology* in 1999, misleadingly suggested that OxyContin was safe and effective as a long-term treatment for osteoarthritis.³⁷ Patients were given OxyContin only for 30 days. Only 106 of the 167 patients continued the study after their appropriate dose was determined, and most who left did so due to ineffective pain control or side effects from the drug. While acknowledging the short-term nature of the trial, the authors still drew the unsupported conclusion that “[t]his clinical experience shows that opioids were well tolerated with only rare incidence of addiction and that tolerance to the analgesic effects was not a clinically significant problem when managing patients with opioids longterm.”

Caldwell et al., *Treatment of Osteoarthritis Pain with Controlled Release Oxycodone or Fixed Combination Oxycodone Plus Acetaminophen Added to Nonsteroidal Antiinflammatory Drugs: A Double Blind, Randomized, Multicenter, Placebo Controlled Trial*, 26:4 *Journal of Rheumatology* 862-868 (1999).

[REDACTED]

48. Another Purdue-authored study, published in the *Clinical Journal of Pain* in 1999, misleadingly implied that OxyContin was safe and effective as a long-term treatment of back pain.³⁸ This study, too, had a high dropout rate and, though it concerned a chronic condition, it followed patients on OxyContin only between four and seven days. The study was not set up to consider long-term risks, including the risk of addiction, but blithely concluded that “common opioid side effects can be expected to become less problematic for the patient as therapy continues.”

B. Purdue worked with professional associations to create treatment guidelines that overstated the benefits and understated the risks of opioids.

49. Treatment guidelines were particularly important to Purdue in securing acceptance for chronic opioid therapy. They are relied upon by doctors, especially general practitioners and family doctors who have no specific training in treating chronic pain. Treatment guidelines not only directly inform doctors’ prescribing practices, but also are cited

³⁸ Martin E. Hale et al., *Efficacy and Safety of Controlled-Release Versus Immediate-Release Oxycodone: Randomized, Double-Blind Evaluation in Patients with Chronic Back Pain*, 15(3) *Clinical Journal of Pain* 179-183 (Sept. 1999).

throughout the scientific literature and referenced by third-party payors in determining whether they should cover prescriptions. Purdue financed and collaborated with two groups, in particular, on guidelines that have been, and continue to be, broadly influential in Utah and nationwide.

1. AAPM/APS Guidelines

50. The American Academy of Pain Medicine (“AAPM”) and the American Pain Society (“APS”) each received substantial funding from Purdue. In 1997, AAPM and APS issued a consensus statement, “The Use of Opioids for the Treatment of Chronic Pain,” that endorsed using opioids to treat chronic pain and claimed that the risk that patients would become addicted to opioids was low. The co-author of the statement, Dr. David Haddox, was, at the time, a paid speaker for Purdue and later became a senior executive for the company. Dr. Portenoy was the sole consultant. The consensus statement remained on AAPM’s website until 2011. The statement was taken down from AAPM’s website only after a doctor complained, though it lingers on elsewhere on the internet.
51. AAPM and APS also issued a 2001 set of recommendations, titled “Definitions Related to the Use of Opioids for the Treatment of Pain,” that advanced the unsubstantiated concept of “pseudoaddiction.” The term, coined by Dr. Haddox in a 1989 journal article, reflects the idea that signs of addiction may actually be the manifestation of undertreated pain and will resolve once the pain is effectively treated—i.e., with more or higher doses of opioids.³⁹ The 2001 AAPM/APS recommendations claimed “clock-watch[ing],” “drug

³⁹ David E. Weismann & J. David Haddox, *Opioid Pseudoaddiction—an Iatrogenic Syndrome*, 36 Pain 363-366 (1989).

seeking,” and “[e]ven such behaviors as illicit drug use and deception can occur in the patient’s efforts to obtain [pain] relief.”

52. Notes taken by Purdue’s sales representatives in Utah show that the sales representatives discussed the false concept of pseudoaddiction with Utah doctors. Dr. Lynn Webster, a key opinion leader in Salt Lake City who was funded by Purdue, admitted in 2012 that pseudoaddiction was “already something we are debunking as a concept” and became “too much of an excuse to give patients more medication. It led us down a path that caused harm.”⁴⁰
53. The 2016 CDC Guideline rejects the concept of pseudoaddiction, explaining that “[p]atients who do not experience clinically meaningful pain relief early in treatment . . . are unlikely to experience pain relief with longer-term use” and that physicians should “reassess[] pain and function within 1 month” to decide whether to “minimize risks of long-term opioid use by discontinuing opioids” because the patient is “not receiving a clear benefit.”⁴¹
54. In 2009, AAPM and APS issued comprehensive opioid prescribing guidelines (“2009 AAPM/APS Guidelines”), drafted by a 21-member panel, that promoted opioids as “safe and effective” for treating chronic pain. The panel made what it termed “strong recommendations” despite “low quality evidence,” and concluded that the risk of addiction is manageable for patients, even patients with a prior history of drug abuse.

⁴⁰ John Fauber, “Painkiller Boom Fueled by Networking,” Milwaukee Wisc. J. Sentinel, Feb. 18, 2012.

⁴¹ 2016 CDC Guideline at 13, 25.

55. Six of the panel members, including Dr. Portenoy, received financial backing from Purdue, and another eight received funding from other opioid manufacturers. One panel member, Dr. Joel Saper, Clinical Professor of Neurology at Michigan State University and founder of the Michigan Headache & Neurological Institute, resigned from the panel because of his concerns that the guidelines were influenced by contributions that drug companies, including Purdue, made to the sponsoring organizations and committee members.
56. The 2009 AAPM/APS Guidelines were reprinted in the *Journal of Pain*, were distributed by Purdue sales representatives to prescribers, and have been relied upon by Utah prescribers in their practices. The guidelines have been a particularly effective channel of deception and have influenced not only treating physicians, but also the body of scientific evidence on opioids. According to Google Scholar, the guidelines have now been cited nearly 1,700 times in academic literature.

2. FSMB Guidelines

57. The Federation of State Medical Boards (“FSMB”) is an association of the various state medical boards in the United States. The FSMB has financed opioid- and pain specific programs through grants from pharmaceutical manufacturers, including more than \$800,000 from Purdue between 2001 and 2008.
58. In 1998, the FSMB developed its Model Guidelines for the Use of Controlled Substances for the Treatment of Pain (“FSMB Guidelines”), which the FSMB acknowledged were produced “in collaboration with” pharmaceutical companies and allied groups such as the APS.⁴² The FSMB Guidelines described opioids as “essential” for treatment of chronic

⁴² FSMB, *Position of the FSMB in Support of Adoption of Pain Management Guidelines*, (1998),

pain, including as a first-line option; failed to mention risks of respiratory depression and overdose; addressed addiction only to define the term as separate from physical dependence; and stated that an “inadequate understanding” of addiction can lead to “inadequate pain control.”

59. A 2004 iteration of the FSMB Guidelines and the 2007 book adapted from them, *Responsible Opioid Prescribing*, repeated the 1998 version’s claims. The book also claimed that opioids would improve patients’ function and endorsed the dangerous, now-discredited concept of pseudoaddiction, which had suggested that signs of addiction may reflect undertreated pain that should be addressed with more opioids. Through at least 2015, the FSMB website described *Responsible Opioid Prescribing* as the “leading continuing medical education (CME) activity for prescribers of opioid medications.” In all, more than 163,000 copies of *Responsible Opioid Prescribing* were distributed nationwide through state medical boards and non-profit organizations. *Responsible Opioid Prescribing* was sponsored by Purdue, among other opioid manufacturers, and Purdue had editorial input into its contents.

3. American Pain Foundation

60. “A Policymaker’s Guide to Understanding Pain & Its Management,” an October 2011 American Pain Foundation pamphlet “made possible by support from Purdue Pharma LP,” asserted that “[l]ess than 1 percent of children treated with opioids become addicted” and that pain was generally “undertreated” due to “misconceptions about opioid addiction.”⁴³

https://www.fsmb.org/Media/Default/PDF/FSMB/Advocacy/1998_grpol_Pain_Management_Guidelines.pdf.

⁴³ *A Policymaker’s Guide to Understanding Pain & Its Management*, Am. Pain Found. 6 (Oct. 2011),

Likewise, in 2002 testimony to the Senate, the American Pain Foundation claimed that addiction is rare, limited to certain extreme cases, and “no additional legislation is needed to attack the diversion and abuse of all opioid pain medications.”⁴⁴

C. Purdue’s direct marketing understated the risk of addiction.

61. Purdue produced and provided directly to doctors and patients marketing materials that intentionally and fraudulently made similar misstatements.
62. Purdue trained sales representatives to minimize the risk of addiction to Purdue products when discussing opioids with doctors, but emphasize the risks of using competing products. For instance, Purdue sales representatives were instructed to tell doctors that opioids’ addiction risk was “less than 1 percent.”⁴⁵

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

In addition, materials that Purdue produced, sponsored, or controlled omitted known risks of chronic opioid therapy and emphasized or exaggerated risks of competing products so that prescribers and patients would favor opioids over other therapies such as over-the-counter acetaminophen

<http://s3.documentcloud.org/documents/277603/apf-policymakers-guide.pdf>.

⁴⁴ *Testimony by the American Pain Foundation: Senate Health, Education, Labor and Pensions Committee Hearing to Examine the Effects of the Painkiller OxyContin, Focusing on Risks and Benefits*, 2 (Feb. 12, 2002) (statement of John D. Giglio, Executive Director American Pain Foundation).

⁴⁵ U.S. Gov’t Accountability Office, GAO-04-110, *Prescription Drugs: OxyContin Abuse and Diversion and Efforts to Address the Problem* 22 (Dec. 2003), <https://www.govinfo.gov/content/pkg/GAOREPORTS-GAO-04-110/pdf/GAOREPORTS-GAO-04-110.pdf>.

or nonsteroidal anti-inflammatory drugs (or NSAIDs, like ibuprofen), which do not pose a risk of addiction. None of these claims were corroborated by scientific evidence.

63. Purdue sponsored training sessions where doctors were given similar misleading information regarding the risks of opioid addiction. For example, Purdue sponsored training sessions in the late 1990s and early 2000s where opioid addiction was described as “exquisitely rare.”⁴⁶
64. All of these statements were contrary to scientific facts known to Respondents. The CDC has directly contradicted Purdue’s representations that opioid addiction is rare when opioids are used properly. The CDC has stated that there is “extensive evidence” of the possible harms of opioids, including opioid use disorder and overdose, and stated that “[o]pioid pain medication use presents serious risks” including addiction; and highlighted that using opioids to treat chronic pain “substantially increases” the risk of addiction.⁴⁷ A 2016 CDC guideline discusses studies that found that as many as 26% of long-term users of opioids experience problems with addiction or dependence.⁴⁸
65. Moreover, in August 2016, the U.S. Surgeon General published an open letter to physicians nationwide, worrying that “heavy marketing to doctors” had led many to be “taught – incorrectly – that opioids are not addictive when prescribed for legitimate pain.”⁴⁹ This letter also noted the “devastating” results that followed from this misinformation.⁵⁰

⁵⁰ *Id.*

66. Findings by the Food and Drug Administration (“FDA”) similarly belie Purdue’s assertions that opioids are safe for treating chronic pain. These findings show that (1) “most opioid drugs have ‘high potential for abuse’”; (2) treatment of chronic pain with opioids poses “known serious risks,” including “addiction, abuse, and misuse ... overdose and death” even when used “at recommended doses”; and (3) opioids should be used only “in patients for whom alternative treatment options” have failed.⁵¹ Additionally, several published clinical studies finding double-digit rates of prescription drug abuse in chronic pain patients controvert Purdue’s claims that addiction rates are only one percent.⁵²
67. As recently as June 2017, the New England Journal of Medicine published an analysis finding that Purdue’s introduction of OxyContin into the marketplace coincided with a significant increase in misleading dissemination of the claim that addiction to opioids is rare. Moreover, the authors of the June 2017 analysis concluded that “[w]e believe that this citation pattern contributed to the North American opioid crisis by helping to shape a narrative that allayed prescribers’ concerns about the risk of addiction associated with long-term opioid therapy.”⁵³

68. Additionally, Respondents pushed patients to stay on Purdue’s opioids through the use of savings cards, or Purdue’s Rx loyalty program. [REDACTED]

D. Purdue falsely claimed that there was no risk in increasing opioid doses to treat chronic pain.

69. Purdue also falsely claimed that doctors and patients could increase opioid doses indefinitely without added risk. Guidelines edited and sponsored by Purdue and another opioid manufacturer, Endo⁵⁴—titled “Treatment Options: A Guide for People Living with Pain” (2006) and “A Policymaker’s Guide to Understanding Pain & Its Management” (2011)—claim that (a) some patients “need” a larger opioid dose, regardless of the dose prescribed; (b) opioids have “no ceiling dose” and are therefore the most appropriate

⁵⁴ Am. Pain Found., *Annual Report* (2010), <https://www.documentcloud.org/documents/277604-apf-2010-annualreport>.

treatment for severe pain; and (c) dosage escalations, even unlimited ones, are “sometimes necessary.”⁵⁵

70. As recently as June 2015, Purdue’s “In the Face of Pain” website was encouraging patients to find another doctor if the patient’s doctor refused to prescribe opioids in doses that were “sufficient” in the patient’s opinion. Also in 2015, Purdue presented a paper at the College on the Problems of Drug Dependence, challenging the correlation between opioid dose and overdose.⁵⁶ And in 2016, Purdue’s Dr. Haddox falsely claimed that evidence does not show that Purdue’s opioids are being abused in large numbers.
71. Purdue made these statements despite strong contrary scientific evidence. The FDA has stated that the available data “suggest a relationship between increasing opioid dose and risk of certain adverse events.”⁵⁷ The CDC has stated that there is “an established body of scientific evidence showing that overdose risk is increased at higher opioid dosages,” and

⁵⁵ Am. Pain Found., *Treatment Options: A guide for people living with pain* (2006), <https://assets.documentcloud.org/documents/277605/apf-treatmentoptions.pdf>; Am. ⁵⁷ Food and Drug Admin., Letter from Janet Woodcock, M.D., Dir. of Center for Drug Evaluation and Research, to Andrew Kolodny, M.D. Responding to Petition Submitted by Physicians for Responsible Opioid Prescribing (Sept. 10, 2013), http://www.supportprop.org/wpcontent/uploads/2014/12/FDA_CDERResponse_to_Physicians_for_Responsible_Opioid_Prescribing_Partial_Petition_Approval_and_Denial.pdf.

has specifically recommended that doctors “avoid increasing doses” above 90 morphine milligram equivalents (“MME”) per day.⁵⁸

72. Nonetheless, Purdue misrepresented the effects of escalating doses to further its pursuit of profit. The ability to escalate doses was critical to Purdue’s efforts to market opioids for chronic pain treatment because doctors would otherwise abandon treatment when patients built up tolerance and no longer obtained pain relief. For at least some products, escalation of dose was key—of the seven available OxyContin tablet strengths, the three strongest—40 milligrams (120 MME), 60 milligrams (180 MME), and 80 milligrams (240 MME)—all exceed the CDC limit by 2.5 to 5.3 times, even taken twice per day as directed.

E. Respondents misleadingly promoted OxyContin as supplying 12 hours of pain relief when they knew that, for many patients, it did not.

73. To convince prescribers and patients to use OxyContin, Respondents misleadingly promoted the drug as providing 12 continuous hours of pain relief with each dose. In reality, OxyContin does not last for 12 hours in many patients, a fact the Respondents have known since the product’s launch. While OxyContin’s FDA-approved label directs 12-hour dosing, the Respondents sought that dosing frequency in order to maintain a competitive advantage over other opioids that required more frequent dosing. Yet Respondents have gone well beyond the label’s instructions to take OxyContin every 12

⁵⁸ Deborah Dowell, Tamara Haegerich, & Roger Chou, *CDC Guideline for Prescribing Opioids for Chronic Pain – United States, 2016*, 65 Morbidity and Mortality Weekly Report 1 (2016), <https://www.cdc.gov/mmwr/volumes/65/rr/rr6501e1.htm>.

hours by affirmatively claiming that OxyContin lasts for 12 hours and by failing to disclose that OxyContin fails to provide 12 hours of pain relief to many patients.⁵⁹

74. Since it was launched in 1996, OxyContin has been FDA-approved for twice-daily—“Q12”—dosing frequency. It was the Respondents’ decision to submit OxyContin for approval with 12-hour dosing. While the OxyContin label indicates that “[t]here are no well-controlled clinical studies evaluating the safety and efficacy with dosing more frequently than every 12 hours,” that is because Purdue has conducted no such studies.

75. From the outset, the Respondents leveraged 12-hour dosing to promote OxyContin as providing continuous, round-the-clock pain relief with the convenience of not having to wake to take a third or fourth pill. The 1996 press release for OxyContin touted 12-hour dosing as providing “smooth and sustained pain control all day and all night.” [REDACTED]

[REDACTED]

[REDACTED] But the FDA has never approved such marketing claims. To the contrary, the FDA found in 2008, in response to a Citizen Petition by the Connecticut Attorney General, that a “substantial number” of chronic pain patients taking OxyContin experienced “end of dose failure”—*i.e.*, little or no pain relief at the end of the dosing period.

76. In fact, the Respondents have long known, dating to the development of OxyContin, that the drug wears off well short of 12 hours in many patients. [REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]
[REDACTED]
[REDACTED]

[REDACTED]

77. End-of-dose failure renders OxyContin even more dangerous because patients begin to experience distressing psychological and physical withdrawal symptoms, followed by a euphoric rush with their next dose—a cycle that fuels a craving for OxyContin. For this reason, Dr. Theodore Cicero, a neuropharmacologist at the Washington University School of Medicine in St. Louis, has called OxyContin’s 12-hour dosing “the perfect recipe for addiction.”⁶⁰ Many patients will exacerbate this cycle by taking their next dose ahead of schedule or resorting to a rescue dose of another opioid, increasing the overall amount of opioids they are taking.

78. [REDACTED]

79. Without appropriate caveats, promotion of 12-hour dosing by itself is misleading because it implies that the pain relief supplied by each dose lasts 12 hours, which the Respondents knew to be untrue for many, if not most, patients. FDA approval of OxyContin for 12-hour dosing does not give the Respondents license to misrepresent the duration of pain relief it provides to patients; moreover, the Respondents had a responsibility to disclose to

⁶⁰ Harriet Ryan, “‘You Want a Description of Hell?’ OxyContin’s 12-Hour Problem”, Los Angeles Times, May 5, 2016, <http://www.latimes.com/projects/oxycontin-part1/>.

prescribers what they knew about OxyContin’s actual duration, regardless of any marketing advantage.

80. [REDACTED]

81. Twelve-hour dosing also is featured in most OxyContin promotional pieces. The 2012 Conversion and Titration Guide, for example, contains the tag line: “Because each patient’s treatment is personal / Individualize the dose / Q12 OxyContin Tablets.” A 2013 brochure for prescribers titled “Identifying Appropriate Patients for OxyContin” similarly promotes the convenience of twice-daily dosing. Upon information and belief, these pieces were distributed in Utah, and neither piece discloses that the pain relief from each 12-hour dose will last well short of 12 hours for many patients.

82. Respondents were also aware of some physicians’ practice of prescribing OxyContin more frequently than 12 hours—a common occurrence. Respondents’ promoted solution to this problem was to increase the dose, rather than the frequency, of prescriptions, even though higher dosing carries its own risks. For example, Purdue’s 2012 Conversion and Titration Guide advises prescribers to “[i]ncrease the OxyContin dose by increasing the total daily dose, not by changing the 12-hour dosing interval.” This advice was not accompanied by appropriate disclosures regarding OxyContin’s shorter-than-12-hour relief in many cases. Using higher doses also means that patients will experience higher highs and lower lows, increasing their craving for their next pill.

F. Respondents overstated opioids’ effect on patients’ function and quality of life.

83. Respondents also claimed—without evidence—[REDACTED] [REDACTED] that long-term opioid use would help to improve patients’ function and quality of life and get them back to work and to their lives.
84. This false message was longstanding and directed from the top. [REDACTED]
[REDACTED]
[REDACTED]
[REDACTED]
85. Purdue and Purdue-sponsored materials distributed or made available in Utah reinforced this message. The 2011 Purdue sponsored publication, “A Policymaker’s Guide to Understanding Pain & Its Management” (2011),⁶¹ falsely claimed that “multiple clinical studies have shown that opioids are effective in improving daily function and quality of life for chronic pain patients.” A series of medical journal advertisements for OxyContin in 2012 presented “Pain Vignettes”—case studies featuring patients with chronic pain conditions—that implied functional improvement. For example, one advertisement described a “writer with osteoarthritis of the hands” and implied that OxyContin would help him work more effectively.
86. Purdue sponsored the Federation of State Medical Board’s (“FSMB’s”) *Responsible Opioid Prescribing* (2007), which taught that relief of pain itself improved patients’ function. *Responsible Opioid Prescribing* explicitly describes functional improvement as the goal of a “long-term therapeutic treatment course.” This publication claimed that

⁶¹ Am. Pain Found., *A Policymaker’s Guide to Understanding Pain & Its Management* (Oct. 2011), <http://s3.documentcloud.org/documents/277603/apf-policymakers-guide.pdf>.

because pain had a negative impact on a patient’s ability to function, relieving pain—alone—would “reverse that effect and improve function.” However, the truth is far more complicated; functional improvements made from increased pain relief can be offset by a number of problems, including addiction. Purdue spent over [REDACTED] to support distribution of the book, which, upon information and belief, was sent to physicians and other prescribers in Utah.

87. Likewise, Purdue’s claims that long-term use of opioids improves patient function and quality of life are unsupported by clinical evidence. There are no controlled studies of the use of opioids beyond 16 weeks, and there is no evidence that opioids improve patients’ pain and function long-term. [REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

88. [REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

89. On the contrary, the available evidence indicates opioids may worsen patients’ health and pain. Increasing the duration of opioid use is strongly associated with an increasing prevalence of mental health conditions (depression, anxiety, post-traumatic stress disorder, and substance abuse), increased psychological distress, and greater health care utilization.

90. As one pain specialist observed, “opioids may work acceptably well for a while, but over the long term, function generally declines, as does general health, mental health, and social functioning. Over time, even high doses of potent opioids often fail to control pain, and these patients are unable to function normally.”⁶² Studies of patients with lower back pain and migraine headaches, for example, have consistently shown that patients experienced deteriorating function over time, as measured by ability to return to work, physical activity, pain relief, rates of depression, and subjective quality-of-life measures. Analyses of workers’ compensation claims have found that workers who take opioids are almost four times more likely to reach costs over \$100,000, stemming from greater side effects and slower returns to work.
91. Assessing existing science, the CDC Guideline found that there was “[n]o evidence show[ing] a long-term benefit of opioids in pain and function versus no opioids for chronic pain with outcomes examined at least 1 year later”⁶³ and advised that “there is no good evidence that opioids improve pain or function with long-term use.”⁶⁴ Similarly, the FDA has warned other opioid product manufacturers that claims of improved function and quality of life were misleading.⁶⁵ The CDC also noted that the risks of addiction and death

⁶² Andrea Rubinstein, *Are We Making Pain Patients Worse?*, Sonoma Med. (Fall 2009), <http://www.nbcms.org/about-us/sonoma-county-medical-association/magazine/sonomamedicine-are-we-making-pain-patients-worse?>

⁶⁸ CDC Guideline at 18.

⁶⁹ Thomas R. Frieden and Debra Houry, *New England Journal of Medicine*, “Reducing the Risks of Relief—The CDC Opioid-Prescribing Guideline” (Apr. 21, 2016).

94. Purdue often delivered its misstatements through “key opinion leaders,” doctors in the field of pain management who were heavily funded by Purdue. Purdue frequently used opinion leaders to deliver its message because it knew that doctors often place great confidence in seemingly independent peers. At least two of Purdue’s key opinion leaders live and work in Utah—Dr. Lynn Webster and Dr. Perry Fine, who served on the board of the American Pain Foundation, discussed above.
95. Dr. Lynn Webster, who works in Salt Lake City, received Purdue funding to develop and teach an online program titled *Managing Patient’s Opioid Use: Balancing the Need and Risk*. This presentation deceptively instructed that screening tools, patient agreements, and urine tests prevented “overuse of prescriptions” and “overdose deaths.” The program currently is available online to Utah prescribers.⁷⁰ Upon information and belief, it has been available online for approximately six years and it has been viewed by additional Utah prescribers since it was first broadcast in September 2011.
96. Another notable opinion leader was Dr. Russell Portenoy, who held himself out as an unbiased expert on opioids but received substantial funding from Purdue. Dr. Portenoy gave, in his words, “innumerable” lectures and media appearances promoting opioids.⁷¹ He also regularly repeated—including in a 1986 paper published in the journal of the American Pain Society, a 1996 paper written on behalf of the American Pain Society and

⁷⁰ Emerging Solutions in Pain, “Managing Patient’s Opioid Use: Balancing the Need and the Risk,” http://www.emergingsolutionsinpain.com/ce-education/opioid-management?option=com_continued&view=frontmatter&Itemid=303&course=209 (last visited Nov. 30, 2017).

⁷¹ Thomas Catan & Evan Perez, *A Pain-Drug Champion Has Second Thoughts*, *The Wall Street Journal*, Dec. 17, 2012, <https://www.wsj.com/articles/SB10001424127887324478304578173342657044604>.

the American Academy of Pain, and numerous lectures—the unsubstantiated claim that the addiction risk posed by opioids was lower than one percent.⁷² Dr. Portenoy later conceded that some of his statements were misleading. In December 2012, he was quoted as saying, “Did I teach about pain management, specifically about opioid therapy, in a way that reflects misinformation? Well, ... I guess I did.”⁷³

97. Between 2001 and 2010, Purdue’s “In the Face of Pain” website similarly presented the statements of opinion leaders who were portrayed as independent experts. The website not only failed to disclose that Purdue had paid many of these opinion leaders for other work, but also did not identify Purdue’s involvement beyond a small copyright notice at the bottom of the website.⁷⁴
98. Purdue also often disseminated its misstatements through industry groups that presented themselves to the public as independent patient advocacy organizations, but whose content and funding came largely from Purdue. These groups included the American Pain Foundation, the American Pain Society, and the American Academy of Pain Medicine. Much like the opinion leaders, these industry groups allowed Purdue to present its misstatements as if they came from unbiased experts.

⁷² Russell Portenoy, *Chronic Use of Opioid Analgesics in Non-Malignant Pain: Report of 38 cases*, 25 *Pain* 171 (May 1986), <https://www.ncbi.nlm.nih.gov/pubmed/2873550>; Russell Portenoy, *Opioid Therapy for Chronic Nonmalignant Pain: A review of the critical issues*, 11 *J. of Pain and Symptom Mgmt.* 203 (Apr. 1996), [http://dx.doi.org/10.1016/0885-3924\(95\)00187-5](http://dx.doi.org/10.1016/0885-3924(95)00187-5); Russell Portenoy, *Opioid Therapy for Chronic Nonmalignant Pain*, 1 *Pain Research and Mgmt.* 17 (1996), <http://downloads.hindawi.com/journals/prm/1996/409012.pdf>.

⁷⁴ Advocacy Voices, *In the Face of Pain* (archived Nov. 7, 2010), <https://web.archive.org/web/20101107090355/http://www.inthefaceofpain.com:80/search.aspx?cat=4#7>.

99. These groups published many of the misleading “guidelines” described above, based on content and funding provided by Purdue, including: (1) “Clinical Guidelines for the Use of Chronic Opioid Therapy in Chronic Noncancer Pain” (2009);⁷⁵ (2) “A Policymaker’s Guide to Understanding Pain & Its Management” (2011);⁷⁶ and (3) “Treatment Options: A Guide for People Living with Pain” (2006).⁷⁷ In 2007, the American Pain Society repeated, at a Senate Judiciary Committee hearing, Purdue’s misstatements that addiction was a “rare problem” for patients using opioids for chronic pain and that there was “no causal effect ... between the marketing of [a particular opioid] and the abuse and diversion of the drug.”⁷⁸
100. Purdue also conducted conferences, training sessions, and educational programs for doctors, often with all expenses paid at resort destinations. These events were useful to Purdue because studies show that such events influence the attending practitioners’ prescribing habits and views towards a drug.⁷⁹
101. From 1996 to 2001, Purdue conducted more than 40 pain management and speaker training sessions at resorts to recruit and train physicians, nurses, and pharmacists as speakers on

⁷⁵ Roger Chou et al., *Clinical Guidelines for the Use of Chronic Opioid Therapy in Chronic Noncancer Pain*, 10 *The J. of Pain* 113 (Feb. 2009), <http://dx.doi.org/10.1016/j.jpain.2008.10.008>.

behalf of Purdue.⁸⁰ Purdue trained more than 5,000 people at these all-expenses-paid events.⁸¹ In addition, the DEA has estimated that Purdue funded over 20,000 opioid pain-related educational programs between 1996 and July 2002 through direct sponsorship or financial grants.⁸²

102. Purdue also used direct sales representatives to market opioids. These representatives received a large amount of their compensation in bonuses based on their individual sales figures, ensuring that they were strongly motivated to present their audiences with misleading information minimizing the risks of opioids.⁸³
103. The FDA does not regulate all of the conduct in which the Respondents engaged. For example, drug labels do not address the use of opioids in treating specific conditions such as lower back pain, headaches, or fibromyalgia, three conditions for which opioids are ineffective, but for which Purdue marketed their drugs. The FDA also does not regulate unbranded advertising. Likewise, the FDA does not regulate the marketing messages or scripts relied on by sales representatives or marketing funneled through third-parties, such as the industry groups discussed above.
104. Purdue not only issued misstatements through channels thought to be the most productive, but also targeted marketing to doctors who would be most receptive to the misstatements. Purdue specifically targeted its marketing to primary care physicians, who are generally

⁸⁰ U.S. Gov't Accountability Office, *Prescription Drugs: OxyContin abuse and diversion and efforts to address the problem* 22 (Dec. 2003), <https://www.gpo.gov/fdsys/pkg/GAOREPORTS-GAO-04-110/content-detail.html>.

⁸² *Id.* at 23.

⁸³ *Id.* at 22.

less aware of the medical literature regarding the dangers of treating chronic pain with opioids. Dr. Portenoy, speaking to an FDA advisory panel on January 30, 2002, acknowledged this fact, stating that “[g]eneralists are adopting [opioid] therapy without adequate knowledge of pain management principles.”⁸⁴ On information and belief, Purdue also directly targeted susceptible patients like veterans and the elderly.

105. Purdue developed methods to specifically target physicians who were already prescribing higher-than-average numbers of opioids. Purdue purchased data from companies such as IMS Health, which provided information regarding the prescribing patterns of physicians nationwide. Through this data, Purdue could identify those prescribers who were already prescribing high amounts of opioid-containing products and target those same doctors for Purdue opioids. Purdue created a database to identify physicians with large numbers of chronic-pain patients (which also showed which physicians were simply the most frequent prescribers of opioids). This database has given Purdue extensive knowledge of where and how its drugs are being used across the country, including in Utah, and has allowed Purdue to target doctors already susceptible to its message.⁸⁵

II. Purdue is misrepresenting its actions with regard to the opioid epidemic.

106. Purdue has also misrepresented to the public that it is taking steps to curb the opioid epidemic, rather than creating it. As recently as November 2017, Purdue stated on its website that “...too often these medications [opioids] are diverted, misused, and abused.

⁸⁴ Food and Drug Admin., Anesthetic and Life Support Drugs Advisory Comm., Tr. of Meeting 119 (Jan. 30, 2002), <http://wayback.archiveit.org/7993/20170404083838/>; <https://www.fda.gov/ohrms/dockets/ac/02/transcripts/3820t1.pdf>.

⁸⁵ Art Van Zee, *The Promotion and Marketing of OxyContin: Commercial triumph, public health tragedy*, 99 Am. J. of Public Health 221, 222 (Feb. 2009), <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC2622774/pdf/221.pdf>.

Teenagers, in particular, are vulnerable to prescription drug abuse, which has become a national epidemic.”⁸⁶ In response to the misuse of opioids, Purdue said that “Corporations have a responsibility to address this issue, and Purdue has dedicated vast resources for helping to prevent drug abuse...”⁸⁷

107. Purdue also stated in November 2017 that it is “committed to being part of the solution to prescription drug abuse” and that it “offers an array of programs focused on education, prevention, and deterrence and through partnerships with (1) healthcare professionals, (2) families and communities, and law enforcement and government” to combat the “widespread abuse of opioid prescription pain medications [that] can lead to tragic consequences, including addiction, overdose, and death.”⁸⁸

108. Also in November 2017, Purdue discussed the opioid epidemic and its response to it, stating that “The nation is experiencing a public health crisis involving licit and illicit opioids. Purdue endorses the following policies that support a comprehensive approach to reducing addiction, abuse, diversion, and overdose related to opioids.”⁸⁹ The policies employed by Purdue include limiting the duration of a patient’s first opioid prescription; use of prescription drug monitoring programs; requiring demonstrated competence for

⁸⁶ Purdue Pharma, *Combating Opioid Abuse*, <http://webcache.googleusercontent.com/search?q=cache:yQnPIZfguWAJ:www.purduepharma.com/h ealthcareprofessionals/responsible-use-of-opioids/combating-opioid-abuse/+&cd=1&hl=en&ct=clnk&gl=us>.

⁸⁷ *Id.*

opioid prescribing; and expanding the use of naloxone, an opioid reversal agent, among other things.⁹⁰

109. However, on information and belief, these representations are untrue. For example, notwithstanding its public statements of corporate responsibility, Purdue has failed to report to authorities illicit or suspicious prescribing of its opioids, even as it has publicly and repeatedly touted its “constructive role in the fight against opioid abuse” and “strong record of coordination with law enforcement.”⁹¹

110. Additionally, since at least 2002, Purdue has maintained a database of health care providers suspected of inappropriately prescribing OxyContin or other opioids. According to Purdue, physicians could be added to this database based on observed indicators of illicit prescribing, such as excessive numbers of patients, cash transactions, patient overdoses, and unusual prescribing volume. Purdue has said publicly that “[o]ur procedures help ensure that whenever we observe potential abuse or diversion activity, we discontinue our company’s interaction with the prescriber or pharmacist and initiate an investigation.”⁹²

111. Yet, according to a 2016 investigation by the *Los Angeles Times*, Purdue failed to cut off these providers’ opioid supply at the pharmacy level and failed to report these providers to

⁹⁰ *Id.*

⁹² *Id.*

state medical boards or law enforcement — meaning Purdue continued to generate sales revenue from their prescriptions.⁹³

112. The *Times*' investigation also found that “for more than a decade, Purdue collected extensive evidence suggesting illegal trafficking of OxyContin” and yet consistently failed to report suspicious dispensing or to stop supplies to the pharmacy.⁹⁴ Despite its knowledge of illicit prescribing, Purdue did not report its suspicions, for example, until years after law enforcement shut down a Los Angeles clinic that Purdue's district manager described internally as “an organized drug ring” and that had prescribed more than 1.1 million OxyContin tablets.⁹⁵

III. Purdue knowingly and intentionally misled Utah prescribers and consumers.

113. The problems engendered by the deceptive and unfair marketing of opioids were specifically known by Purdue. Purdue was aware that its statements were misleading not only because it knew these statements were contrary to established fact, but also because it was fined and otherwise sanctioned by various government entities for its misleading marketing, and yet continued to disseminate the same marketing messages.
114. In 2007, Purdue settled federal allegations that it had introduced misbranded drugs into interstate commerce. The settlement included over \$700 million in payments to the United

⁹³ See Harriet Ryan et al., *More Than 1 Million OxyContin Pills Ended Up in the Hands of Criminals and Addicts. What the Drugmaker Knew*, L.A. Times, July 10, 2016, <http://www.latimes.com/projects/la-me-oxycontin-part2/>.

⁹⁴ *Id.*

⁹⁵ *Id.*

States and guilty pleas by three of Purdue's executive officers.⁹⁶ Purdue acknowledged that "some employees made, or told other employees to make, certain statements about OxyContin to some healthcare professionals that were inconsistent with the FDA-approved prescribing information for OxyContin and the express warning it contained about risks associated with the medicine."⁹⁷

115. On August 20, 2015, New York State concluded a multiyear investigation of Purdue and settled claims against the company related to its marketing and sales practices. Specifically, the agreement required Purdue to ensure that its sales representatives flag doctors and other professionals who were improperly prescribing and/or diverting opioids, stop calling and/or marketing to doctors on the company's "no-call list," and provide information to health care providers about FDA-approved training programs regarding the appropriate prescription of opioids. The agreement also required Purdue to cease marketing representations on its website "www.inthefaceofpain.com" implying that the website was neutral or unbiased, and to disclose the financial relationships Purdue's purported neutral experts have with the company.⁹⁸

⁹⁸ Press Release, N.Y. State Office of the Attorney General, A.G. Schneiderman Announces Settlement With Purdue Pharma That Ensures Responsible And Transparent Marketing Of Prescription Opioid Drugs By The Manufacturer (August 20, 2015), <https://ag.ny.gov/press-release/ag-schneiderman-announces-settlement-purdue-pharma-ensures-responsible-and-transparent>.

116. In August 2017, Purdue settled, for over \$20 million, claims by numerous Canadian plaintiffs that the company failed to warn about the dangers of OxyContin, including its addictive properties.⁹⁹

117. Respondents knew that their continuing efforts to employ deceptive and unfair marketing, despite Purdue being previously sanctioned by government agencies for such actions, would contribute to the opioid epidemic in Utah, and would create access to opioids by at-risk and unauthorized users, which, in turn, would perpetuate the cycle of abuse, addiction, demand, and illegal transactions.

118. [REDACTED]

119. Furthermore, Purdue knew that when more patients gained access to opioids based on deceptive and false marketing, tragic, preventable injuries would result, including addiction, abuse, overdoses, and death. It was reasonably foreseeable that many of these injuries would be suffered by Utah citizens, and that the costs of these injuries would be shouldered by the State and state agencies.

120. It was foreseeable that the increased number of prescriptions for opioids resulting from Purdue's deceptive and unfair marketing would cause harm to the citizens and government

of Utah. [REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

121. Purdue made substantial profits over the years based on the intentionally deceptive and unfair marketing of opioids in Utah.
122. Purdue's deceptive and unfair marketing of prescription opioids to Utah citizens showed a reckless disregard for the safety of Utah and its citizens. Its conduct poses a continuing threat to the health, safety, and welfare of Utah and its citizens.
123. Purdue's misleading marketing and failure to prevent opioid diversion in and around Utah has contributed to a range of social problems, including violence and delinquency, that were foreseeable to Respondents. These foreseeable adverse social outcomes include child neglect, family dysfunction, babies born addicted to opioids, criminal behavior, poverty, property damage, unemployment, and social despair. As a result, more and more of Utah's resources and those of its counties and municipalities are devoted to addiction-related problems. Meanwhile, the prescription opioid crisis diminishes Utah's available workforce, decreases productivity, increases poverty, and consequently requires greater State and local expenditures.

124. Prescription opioid abuse costs the State approximately \$238 million in healthcare costs, not to mention additional social services and education expenses.¹⁰⁰ And, it adds an estimated \$169 per capita in costs to Utah’s healthcare system, loss in productivity, and criminal justice costs. Mortality costs brings the total to approximately \$1,827 per Utahn.

IV. The Sackler Respondents are personally responsible.

125. Respondent Richard Sackler and Respondent Kathe Sackler each personally directed the unfair, deceptive and otherwise unlawful conduct alleged herein. Their actions were taken as members of the Purdue Board of Directors as well as individually as Purdue executive officers and owners of, as the company describes it, [REDACTED]

A. The Sackler Respondents’ actions as members of the board

126. Purdue’s Board of Directors is very hands-on, described in the company’s own planning documents as [REDACTED]

128. [REDACTED]

129. The Sackler Respondents were both longstanding members of Purdue’s Board of Directors. As such, they were informed of and approved the decisions related to Purdue’s marketing and compliance operations that were at the core of Purdue’s business. However, as laid out below, Richard and Kathe Sackler exercised a level of involvement and control, particularly in the unlawful conduct described in this Citation, that surpassed even that of other Sackler Board member-owners. In addition, as also detailed below, each of the Sackler Respondents served for many years as executive officers of Purdue, taking many actions personally to carry out the unfair, deceptive and otherwise unlawful activity that led to Utah’s opioid epidemic.

B. Richard Sackler

130. [REDACTED]

131. Accordingly, Respondent Richard Sackler personally oversaw, directed, made and approved many of the key decisions regarding Purdue’s opioids and he is legally responsible for their outcomes in Utah. [REDACTED]

[REDACTED]

132. Respondent Richard Sackler spent 43 years at Purdue in his various capacities, including the head of marketing, President, Co-Chairman of the Board, and board member. Upon information and belief, as head of Purdue's marketing department and then President and Co-Chairman of Purdue's Board, with a demonstrated interest and involvement in Purdue's sales efforts and promotional messaging, Respondent Richard Sackler would have been aware of and approved all of Purdue's marketing themes and strategies.

133. Respondent Richard Sackler has been characterized in the press as having an appetite for micromanagement. [REDACTED]

[REDACTED]

[REDACTED] Throughout his tenure, Respondent Richard Sackler either had knowledge of Purdue's marketing misrepresentations, or was recklessly indifferent to their truth or falsity, [REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

101 [REDACTED]

[REDACTED]

134. This detailed involvement began even more than a year before Purdue launched OxyContin. [REDACTED]

[REDACTED]

[REDACTED] Upon information and belief, Defendant Richard Sackler and his team at Purdue decided not to disclose the study to the FDA.

135. [REDACTED]

136. [REDACTED]

137. Thereafter, Richard Sackler became involved—deeply—in every aspect of Purdue’s marketing operations. [REDACTED]

159.

166. In marketing and selling prescription opioids, Respondents have knowingly or intentionally and persistently committed deceptive acts or practices, in violation of the CSPA. Utah Code § 13-11-1, *et seq.*
167. Respondents violated the CSPA by knowingly or intentionally, and fraudulently indicating that opioids had sponsorship, approval, performance characteristics, uses, or benefits, when they did not, in violation of Utah Code § 13-11-4(2)(a).
168. Respondents violated the CSPA by knowingly or intentionally, and fraudulently omitting or concealing material facts and failing to correct prior misrepresentations and omissions about the risks and benefits of opioids. Respondents' omissions rendered even their seemingly truthful statements about opioids deceptive.
169. Respondents violated the CSPA by knowingly or intentionally, and fraudulently indicating that opioids were of a particular standard, quality, grade, style, or model, when they were not, in violation of Utah Code § 13-11-4(2)(b).
170. Respondents violated the CSPA by knowingly or intentionally, and fraudulently indicating that opioids had been supplied in accordance with Purdue's previous representations, when they had not, in violation of Utah Code § 13-11-4(2)(e).

COUNT III

171. The Division realleges and incorporates by reference the foregoing allegations as if set forth at length herein.
172. Respondents have knowingly or intentionally, and fraudulently marketed drugs through misstatements and omissions of facts regarding the safety and efficacy of their drugs, and they have failed adequately to guard against misstatements and omissions concerning opioids made by their employees and agents. Respondents knew or had reason to know

that their misstatements, omissions, and failure to guard against misstatements and omissions made by their employees and agents would harm Utah's citizens.

173. By manufacturing and marketing opioids in the manner described above, or by directing others to do so, Respondents have also committed unconscionable acts or practices in violation of Utah Code § 13-11-5. Specifically, Respondents have violated their statutory duties to Utah and Utah citizens to report suspicious prescribers in Utah communities that were known to Respondents, have misused their position of trust in the community, and have preyed on Utah's most vulnerable residents for profit.
174. For purposes of penalty calculations, each instance where Respondents have misrepresented a material fact or suppressed, concealed, or omitted any material fact regarding the prescription opioids they manufactured or marketed constitutes a separate violation of the CSPA. The Division intends to calculate the administrative fines after the liability portion of the case has concluded.

THIS CITATION ISSUED this 30 day of January, 2019.

A handwritten signature in blue ink, reading "Daniel R. O'Bannon", is written over a horizontal line.

NOTICE
IMPORTANT - READ CAREFULLY

This citation may be contested by filing a request for review, in writing, within twenty (20) days of receipt of this citation. Following receipt of a request for review, an informal hearing will be scheduled before the State of Utah, Department of Commerce, Division of Consumer Protection pursuant to Utah Code § 63G-4-203, Procedures for Informal Adjudicative Proceedings. The purpose for the hearing is a review of the citation for factual and legal sufficiency and other questions to be determined by the presiding officer.

A citation that is not contested becomes the final default order of the Division. A defaulted party may make a motion to the presiding officer to set aside a default. Utah Code § 63G-4-209(3). The defaulted party may seek agency review pursuant to Utah Code § 63G-4-301, or reconsideration pursuant to Utah Code § 63G-4-302, only of the presiding officer's decision on the motion to set aside the default. *See* Utah Code § 63G-4-209(3)(c).

In addition to any fines that may be levied, a cease and desist order may be entered against you. An intentional violation of a final cease and desist order is a third degree felony. Utah Code § 13-2-6(2).

To request a review of the citation, mail your written request to:

Daniel R. S. O'Bannon – Director
Utah Division of Consumer Protection
PO Box 146704
Salt Lake City, UT 84114-6704

The presiding officer designated by the Director of the Division of Consumer Protection to conduct the hearing in your case is:

Bruce Dibb, Administrative Law Judge
Heber M. Wells Bldg., 2nd Floor
160 East 300 South
Salt Lake City, UT 84114
Telephone: (801) 531-6706

Please be advised that all inquiries, correspondence, or other contacts concerning this citation, with the exception of any written request for review as set out above, should be directed to the following, counsel for The Division of Consumer Protection:

Robert Wing or Kevin McLean
Assistant Attorneys General
Utah Attorney General's Office
160 East 300 South, 5th Floor
PO Box 140872
Salt Lake City, UT 84114-0872
Telephone: (801) 366-0310

FREQUENTLY ASKED QUESTIONS

1. **How can I talk to someone at the Division about this citation?** The name of the investigator assigned to your case appears at the end of your citation. If you call the Division, 801-530-6601 and press 0, the receptionist can help transfer you to the assigned investigator.
2. **Can I resolve the citation without a hearing?** Contact the investigator assigned to your case if you are interested in a settlement to see if a settlement is possible in your case.
3. **How do I respond to the citation?** You may challenge the citation by submitting a written Request for Review using the attached form or using your own form.
4. **How long do I have to respond to the citation?** You have 20 calendar days from issuance of the citation to submit a Request for Review.
5. **What happens after I submit a Request for Review?** The presiding officer will send you a Notice of Administrative Hearing specifying a time, date, and location of a hearing before the Division.
6. **Who will preside over the case?** The name of the presiding officer for the hearing will be on your Notice of Administrative Hearing. Please address the presiding officer by name (e.g., "Judge Smith"). You may contact the presiding officer with any technical or procedural questions, but the presiding officer may not discuss the merits of the case with you.
7. **What if I have a scheduling conflict with the scheduled hearing time?** Failure to attend a hearing may result in a default and entry of judgment against you. You may ask the presiding officer assigned to your case, in writing, to reschedule the hearing if you have a conflict or require more time to prepare. A request for additional time is within the discretion of the presiding officer and may not be granted, particularly if requested only shortly before the scheduled hearing.
8. **What should I expect at a hearing?** An administrative law judge will act as the presiding officer and direct the proceeding. The hearing room has two tables for the parties, with the presiding officer sitting at the front of the hearing room. Generally you (and your counsel, if applicable) will sit at one of the tables and Division staff will sit at the other table. Beginning with the Division, both sides will have an opportunity to present witnesses, evidence, and argument in support of why the citation should or should not stand.
9. **What kind of evidence can I present?** All parties may testify, present evidence, and comment on the issues. In presenting evidence, any party may examine witnesses and submit exhibits. At the request of either party, or at his or her own initiative, the presiding officer may also choose to examine a witness. Any party may ask to present a witness by telephone. The presiding officer may exclude any evidence he or she deems irrelevant, immaterial, or unduly repetitious or improper.
10. **How can I determine what evidence the Division has?** Discovery is prohibited in informal hearings, but parties may request information contained in the agency's files to the extent permitted by law. You may contact the assigned investigator to request access to this information.
11. **What is the burden of proof for the Division at a hearing?** Generally the Division is responsible to prove its case against you by substantial evidence.
12. **Must I have an attorney?** You may represent yourself or be represented through an attorney. You may also represent a business that you own or manage.

You should not rely on this letter alone for instructions regarding hearings. The hearing is governed by law (including the Administrative Procedures Act, *see* Utah Code § 63G-4 *et al.*, Utah Division of Consumer Protection, *see* Utah Code § 13-2 *et al.*, and Department of Commerce Administrative Procedures Act Rules, *see* Utah Admin. Code R151-4.) You may access these laws and rules at le.uteth.gov and rules.utah.gov.

REQUEST FOR REVIEW

DCP Legal File No.		Date of Citation:	
Name:		Phone: ()	
Address:			
City:		State:	Zip:
Email:			

Requests for review must be received by the division within 20 calendar days of issuance of the citation. Utah Code § 13-2-6(3). If you fail to make a timely request, the citation shall become the final order of the division. If you represent multiple respondents, please submit a separate request for each respondent.

You may wish to consult an attorney before submitting this form and any attachments.

Select only one of the following:

- I admit to the statutory violation(s) described in the citation. The presiding officer will enter an order, assess a fine, and issue a cease and desist order.
- I admit to the statutory violation(s) described in the citation, but request a hearing to explain the circumstances of the violation(s) and request a reduced fine. *(If desired, attach a brief typewritten explanation of the circumstances of the violations. The presiding officer may ask you to submit an additional response.)*
- I contest the occurrence of the violation(s) described in the citation and request a hearing to contest the citation. *(If desired, attach a brief typewritten response to the allegations in the citation. The presiding officer may ask you to submit an additional response.)*

I certify that I have knowingly and voluntarily made the above election of rights. I understand that if I request a hearing the presiding officer will notify me in writing of the hearing date. If I fail to appear at the hearing, a default judgment may be entered against me. I acknowledge that I have either sought the advice of an attorney or have voluntarily chosen not to do so.
